

Metal Gratings

Bar Grating **NEW!**

Consists of a series of bearing bars welded together at intervals to form a load-bearing panel. It is a strong, durable, cost effective solution for a variety of applications, providing strength and safety when needed the most.

Available in Standard and Heavy-Duty Steel, Fisholow Aluminum and Stainless Steel.

Grip Strut Grating (Standard & Heavy-Duty)

Is quick and economical to install and has a serrated surface which grips onto shoe soles securely from every direction preventing slips, slides and falls. Its maintenance-free, open design allows for quick drainage of fluids and for debris to easily pass through.

Heavy Duty Grip Strut Safety Grating is used in long span walkways and other areas where there is a need to support greater loads.

Grate-Lock Grating

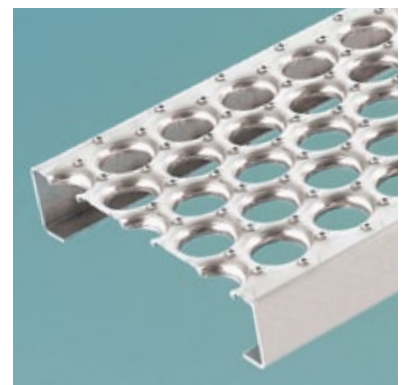

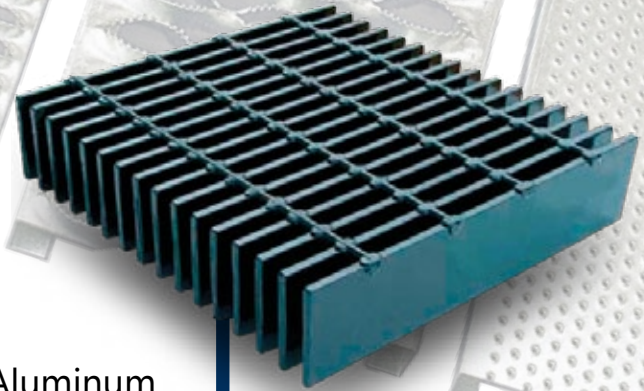

Utilizes an easy-to-install interlocking plank design that provides safe and sturdy footing in a wide variety of applications, including: mezzanine flooring, signboard walkways, inspection platforms and rack decking.

Grate-Lock is sold in 3 different gauges, 3 widths, and 4 heights, making it adaptable to nearly any design.

Perf-O-Grip Grating

Consists of a combination of large debossed holes and perforated buttons which provide a superior anti-slip surface. This also allows for debris and fluids to pass through easily, while still maintaining an extremely safe walking surface. Perf-O-Grip Safety Grating is available in a wide variety of standard widths and channel heights.

Non-standard shapes and sizes may also be available.

Traction Tread Grating

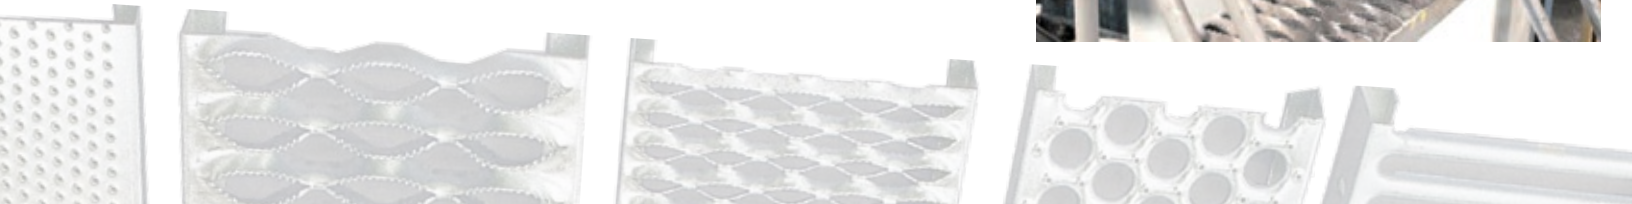

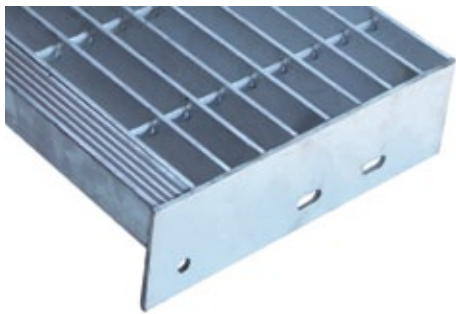

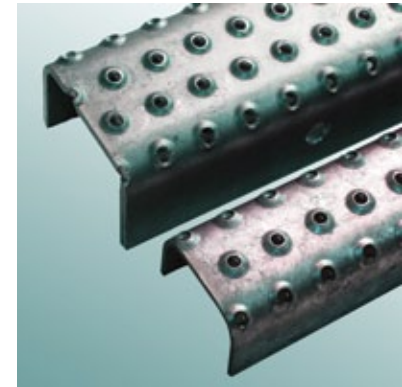

Is available as flooring, planks, or ladder rungs. Its surface is comprised of perforated buttons which provide a moderately slip-resistant texture that is less aggressive than many other safety gratings. The smaller hole pattern makes it more compatible with a wider range of shoe types (including heels). Traction Tread can also be applied over existing surfaces, that do not provide slip-resistance, as a reconditioner.

Traction Tread Ladder Rungs

Features a surface with moderate slip resistance that offers just enough texture to provide a good hand grip without being so aggressive that it could cause injury to hands. Products are sold in convenient lengths that are well suited to fabricators of ladders. Vehicle applications are also an option.

Grating Stair Treads

Anti-slip steel grating stair treads are manufactured from high quality plank grating. With pre-punched, welded on carrier plates, our stair treads are ready to bolt together with stair stringers. Treads are available in Grip Strut, Perf-O-Grip, Heavy-Duty Grip Strut, and Traction Tread, in a variety of materials, with optional nosings. ***Bar Grating Stair Treads Now Available!**
